

Logic analyzers up to 50% off

A special limited-time offer from Agilent.

Agilent portable and modular logic analyzers

- Increased visibility with FPGA dynamic probe
- Customized protocol analysis with Agilent's exclusive packet viewer software
- Low-cost embedded PCI Express packet analysis
- Pricing starts at \$9,450

Now you can see inside your FPGA designs in a way that will save weeks of development time.

The FPGA dynamic probe, when combined with an Agilent Windows®-based logic analyzer, allows you to access different groups of signals inside your FPGA for debug—without requiring design changes. You'll increase visibility into internal FPGA activity by gaining access up to 128 internal signals with each debug pin.

Our 16800 Series logic analyzers offer you unprecedented price-performance in a portable family, with up to 204 channels, 32 M memory depth and a pattern generator available.

And now for a limited time, you can receive up to 50% off our newest 16901A modular logic analyzer mainframe when you purchase eligible measurement modules. Offer valid February 1, 2007 through August 15, 2007. Reference promotion 5.564.
