Silicon Labs CP210x USB-to-UART Installation Guide

Overview

Many Xilinx evaluation boards and some characterization boards are equipped with the Silicon Labs CP2103 USB-to-UART bridge integrated circuits. This guide explains how to install the drivers for the USB-to-UART bridge.
Download and Install the Required Drivers

1. Go to the Silicon Labs CP210x USB-to-UART Bridge VCP Drivers download page.
2. Download the virtual COM port (VCP) driver for your operating system to your PC. See Figure 1.

3. Extract the ZIP archive file.
4. Open the extracted file and select the executable file that is compatible with your PC. For example, for Windows 64-bit, select CP210xVCPInstaller_x64.exe.

Figure 1: Silicon Labs CP210x Driver Download Page
5. Step through the guided installer. Accept the license agreement and install the software on your PC. When the software is successfully installed, the dialog box shown in Figure 2 is displayed.

6. The next step is to set up a terminal emulator. Continue with the instructions in the appropriate quick start guide. At the appropriate time, you will be directed on the configuration of the terminal settings. If you do not have a terminal emulator, download the Tera Term emulator and follow the installation process in the *Tera Term Terminal Emulator Installation Guide* (UG1036) [Ref 2].

**Note:** Use of the Tera Term terminal emulator is not required and other terminal emulators can be used. Tera Term is recommended by Xilinx based on its long history as a reliable software product.
Additional Resources and Legal Notices

Xilinx Resources

For support resources such as Answers, Documentation, Downloads, and Forums, see Xilinx Support.

For a glossary of technical terms used in Xilinx documentation, see the Xilinx Glossary.

Solution Centers

See the Xilinx Solution Centers for support on devices, software tools, and intellectual property at all stages of the design cycle. Topics include design assistance, advisories, and troubleshooting tips.
