Introduction
Thank you for designing with the Xilinx Virtex®-5 family of devices. Although Xilinx has made every effort to ensure the highest possible quality, the devices listed in Table 1 are subject to the limitations described in the following errata.

Devices
These errata apply to the Virtex-5 devices, as shown in Table 1.

Hardware Errata Details
This section provides a detailed description of each hardware issue known at the release time of this document.

GTX Transceivers
Clock Correction
The Clock Correction feature of the Virtex-5 FPGA GTX transceiver can cause data corruption on the receiver when a clock correction sequence is skipped or added. See UG198, Virtex-5 FPGA RocketIO GTX Transceiver User Guide for more detailed information about the Clock Correction feature.

This issue can occur when all of the following conditions are true:

- Asynchronous operation: When the local reference clock of the Virtex-5 FPGA GTX transceiver is driven from a different oscillator than the far-end transceiver. This introduces a parts per million (PPM) offset in frequency between the operation of the transceivers, requiring clock correction to skip or add clock correction sequences on a periodic basis. This also implies that the RXUSRCLK and RXUSRCLK2 ports of the Virtex-5 FPGA GTX transceiver are derived from the local oscillator and not the RXRECCLK port.
- Clock Correction is enabled.
  - CLK_CORRECT_USE_0/1 attribute is set to TRUE.
- The length of the clock correction sequence is 1 or 3 Bytes.
  - CLK_COR_ADJ_LEN_0/1 attribute is set to 1 or 3.

When the conditions described above are met, one of the multiple work-around options described below shall be used to mitigate this issue. XAUI, PCIe®, SRIO, and Infiniband are the most common protocols affected but only when used in asynchronous operation.
Work-around

If the application permits, implement one of the following work-around options:

• Use synchronous clocking
• Convert to 2 byte or 4 byte clock correction sequence
• If the application does not permit one of these options, see Answer Record 32164.

All versions of UG198, Virtex-5 FPGA RocketIO GTX Transceiver User Guide subsequent to the current version, v2.1, will properly reflect the Clock Correction behavior described herein.

Operational Guidelines

Design Software Requirements

The devices listed in Table 1, unless otherwise specified, require the following Xilinx development software installations.

• Speed specification v1.63 (or later), Xilinx ISE™ Design Suite 10.1, Service Pack 3 (or later).

Traceability

Additional Questions or Clarifications

All other device functionality and timing meet the data sheet specifications. For additional questions regarding these errata, please contact Xilinx Technical Support: http://www.xilinx.com/support/clearexpress/websupport.htm or your Xilinx Sales Representative: http://www.xilinx.com/company/contact.htm.

Notice of Disclaimer

THE XILINX HARDWARE FPGA AND CPLD DEVICES REFERRED TO HEREIN ("PRODUCTS") ARE SUBJECT TO THE TERMS AND CONDITIONS OF THE XILINX LIMITED WARRANTY WHICH CAN BE VIEWED AT http://www.xilinx.com/warranty.htm. THIS LIMITED WARRANTY DOES NOT EXTEND TO ANY USE OF PRODUCTS IN AN APPLICATION OR ENVIRONMENT THAT IS NOT WITHIN THE SPECIFICATIONS STATED ON THE XILINX DATA SHEET. ALL SPECIFICATIONS ARE SUBJECT TO CHANGE WITHOUT NOTICE. PRODUCTS ARE NOT DESIGNED OR INTENDED TO BE FAIL-SAFE, OR FOR USE IN ANY APPLICATION REQUIRING FAIL-SAFE PERFORMANCE, SUCH AS LIFE-SUPPORT OR SAFETY DEVICES OR SYSTEMS, OR ANY OTHER APPLICATION THAT INVOKES THE POTENTIAL RISKS OF DEATH, PERSONAL INJURY OR PROPERTY OR ENVIRONMENTAL DAMAGE (“CRITICAL APPLICATIONS”). USE OF PRODUCTS IN CRITICAL APPLICATIONS IS AT THE SOLE RISK OF CUSTOMER, SUBJECT TO APPLICABLE LAWS AND REGULATIONS. ALL SPECIFICATIONS ARE SUBJECT TO CHANGE WITHOUT NOTICE.
