

*BEST-IN-CLASS PERFORMANCE-PER-WATT WITH TRANSCEIVERS
FOR COST-SENSITIVE MARKETS*

New Performance and Bandwidth Standards for Power-Limited, Cost-Sensitive Markets

The digital revolution has changed expectations for novice and savvy FPGA designers alike. Competing in cost-sensitive markets, such as aerospace and defense, communications infrastructure, medical, industrial, and consumer electronics, calls for a strong portfolio of high-performance features over a broad density range. Without sacrificing performance, developers must be able to extend use models for greater processing bandwidth, portability, and application reach while keeping power — a critical resource — to a minimum.

The Xilinx® Artix®-7 family of FPGAs has redefined cost-sensitive solutions by cutting power consumption in half from the previous generation while providing best-in-class transceivers and signal processing capabilities for high bandwidth applications. Built on the 28nm HPL process, these devices deliver best in class performance-per-watt. Together with the MicroBlaze™ soft processor, Artix-7 FPGAs are ideal for products like portable medical equipment, military radios, and compact wireless infrastructure. Artix-7 FPGAs meet the needs of size, weight, power, and cost (SWaP-C) sensitive markets like avionics and communications.

The Challenge: The Need to Reduce Power & Cost

- Reducing power for greater portability
- Delivering highest performance while reducing cost
- Providing advanced functionality in a small form factor

The Solution: Artix-7 FPGAs

- 50% lower power vs. previous generation
- Best-in-class performance-per-watt
- Over 200DMIPs of processing power, plus drag n' drop peripherals with MicroBlaze soft processor
- Small footprint and packaging
- Part of the broadest All Programmable Cost-Optimized Portfolio

Key Capability Overview

New Levels of Performance

- 6.6Gb/s transceivers enabling 211Gb/s peak bandwidth (full duplex)
- Single and double differential I/O standards with speeds of up to 1.25Gb/s
- 740 DSP48E1 slices with up to 930 GMACs of signal processing
- 1,066Mb/s DDR3 memory, including SODIMMs support
- 200+ DMIPs MicroBlaze processor in Microcontroller, Real Time Processor, or Application Processor configuration
- Integrated memory interface for streamlined access

Twice the Capacity, Half the Power, Comparable Cost

- 50% lower total power compared to previous generation
- Sub-watt performance ranging from 13K–2,000K logic cells
- 2X logic, 2.5X block RAM, 5.7X more DSP slices than Spartan®-6 FPGAs
- Lowest-power Industrial speed grade offering (-1LI)

Low Risk, Rapid Ramp-Up

- Production proven 28nm process, architecture, and quality
- Integrated IP blocks to reduce development time and risk
- Integrated wizards for rapid development of built-in blocks
- Bare metal, freeRTOS, and Linux support for MicroBlaze processor with drag n’ drop peripherals
- Development kits with IP and reference designs for quick design starts

Smallest Package

- Low-cost, wire-bond, chip-scale BGA packaging
- Available in a 10x10mm package for maximum system integration
- Package migration across the family

Best-in-Class Performance and Bandwidth for Cost-Sensitive Markets

Artix-7 devices deliver the industry’s most optimized transceivers, highest performance, and lowest power. This family is the perfect fit for cost-sensitive applications that need high-end features. The Artix-7 family is the industry’s cost-optimized performance leader in nearly every category of performance, including logic, signal processing, embedded memory, LVDS I/O, memory interfaces, and in particular, transceivers.

The [MicroBlaze](#) CPU is a highly configurable 32-bit RISC processor optimized for Xilinx FPGAs. For fast deployment, presets are available for Microcontroller, Real-Time Processor, and Application Processor use cases. Start with a preset, then further customize specific processor features to meet the specific needs of your application. Then expand your MicroBlaze processor system using drag n’ drop IP from a catalog of driver-enabled peripherals such as PWMs, UARTs, serial interfaces, etc. The MicroBlaze processor, drag n’ drop peripherals, [Vivado HLx Design Suite WebPACK edition](#), and [Eclipse-based Software Development Kit](#) are all available at no cost from Xilinx.

As part of the 7 series, Artix-7 FPGAs also offer other system integration capabilities such as integrated, advanced Analog Mixed Signal (AMS) technology. Whether implementing a simple analog-to-digital converter or replacing more costly system-on-a-chip (SoC) functions, analog is the next level of integration that is efficiently accomplished with the independent dual 12-bit, 1MSPS, 17-channel analog-to-digital converters in Artix-7 FPGAs.

Part of the Broadest Portfolio

The Artix-7 family is part of the broadest All Programmable Cost-Optimized Portfolio—delivering the best value for a given application. The portfolio also includes Spartan-6 and Spartan-7 FPGAs, which deliver I/O optimization, and Zynq®-7000 All Programmable SoCs, which deliver system integration and optimization for applications.

Inrevium ACDC Artix-7 FPGA Evaluation Kit

Getting Started with Evaluation Kits

To get started with the Artix-7 family, Xilinx offers both the Artix-7 FPGA AC701 and Artix-7 50T FPGA Evaluation Kits, enabling quick prototyping for cost-sensitive applications. These include all the basic components of hardware, design tools, IP, and pre-verified reference designs. Visit www.xilinx.com/boards-and-kits to learn more about Xilinx and partner development boards.
